As business demands and technology continue to evolve, information technology organizations are facing service delivery challenges. Many factors have contributed to application and quality management changes over the last decade, including Technology (Cloud Computing, Mobilization), Agile Development and Globalization. Stakeholder and economic pressures have increased demands on development and system maintenance cycles to meet key business drivers, including time to market, quality, cost and governance.

## Quality Driven Approach

### Validations

#### Requirements

- Stakeholder Adherence
- Revise, Enhance, etc.
